

TIP SHEET

EARTHQUAKE

Earthquakes strike suddenly, without warning, and can occur at any time of the year, day or night. While most buildings have been designed to resist earthquakes and protect occupants, some structures may have deficiencies that can lead to substantial damage and possible collapse. The following tips and actions may be helpful to consider in areas of moderate and high seismicity.

Actions to take before an earthquake

Plant Management/Emergency Team

- Determine if the facility is safe by identifying and understanding where possible problems can occur
- Strengthen and secure facility by reducing or eliminating identified hazards
- Develop an emergency preparedness plan that includes: evacuation and reunion plans, training and practice drills, inspection checklists, shutdown procedures, out-of-region contacts for vendors and emergency services
- Maintain emergency equipment and supplies in easily accessible locations (i.e., shipping container located away from any potential falling hazards)

Buildings and Non-structural Elements

- Assess seismic adequacy of buildings and non-structural elements; a seismic risk assessment can be performed by qualified licensed Structural Engineers that specialize in earthquake mitigation to determine how the buildings and non-structural elements will perform in a future earthquake and identify potential vulnerabilities and concerns
- Implement identified mitigation measures to reduce business interruption, loss of market share, property damage, occupant injuries, insurance costs, threat to shareholder equity and litigations costs

Cost-effective measures can include:

- Providing an emergency gas shutoff valve to limit potential gas leakage
- Bolting and bracing mechanical and electrical equipment to prevent damage from shifting and falling injury to nearby occupants
- Bolting and bracing potential falling objects such as bookcases and cabinets
- Bracing all suspended ceilings and light fixtures to prevent them from falling on occupants below
- Bracing hot water heaters, especially gas-fired units, to avoid pipe failures, water damage and gas leakage
- Providing egress corridors free of falling objects and debris that could impede exits through any passageway

Emergency Equipment

As a minimum, the following equipment and supplies should be considered:

- Food and water, first aid kits, shelter materials such as blankets and tents, flashlights and spare batteries, portable battery-powered radios and spare batteries, satellite phones, and rescue equipment such as ropes, jacks and cutters
- Provide adequate emergency power back-up (i.e., generators and fuel)

Actions to take during an earthquake

Plant Management/Emergency Team

If you are inside a building when the shaking starts:

- ❑ Drop where you are, cover and hold on
- ❑ Stay away from windows to prevent injury from shattered glass
- ❑ Stay away from hazards such as heavy objects that can fall
- ❑ Stay indoors until shaking stops and it is safe to exit

If you are outside when the shaking starts:

- ❑ Find a clear area and sit on the ground
- ❑ Stay away from power lines, trees and streetlights

“Catastrophes and natural disasters can have sudden and devastating impact. A little preparation and the right partner can go a long way. Take steps to protect your business and your people before disaster strikes.”

Actions to take after an earthquake

Plant Management/Emergency Team

- ❑ The Earthquake Emergency Response Team should be prepared and trained in recovery and salvage efforts specific for each location
- ❑ The site should be secured and a Command Center should be established to direct the recovery operation
- ❑ Survey and identify life-safety hazards such as: permanently deformed structures (leaning or tilting), extensive cracking and distortions to structural elements, leaking gas or flammable materials, spillage of toxic chemicals, unstable ceilings, partition walls, etc., and injured or trapped occupants
- ❑ Expect aftershocks and never enter an unsafe building because further damage can occur and lead to possible life-safety hazards
- ❑ Structural damage should always be assessed by a licensed Structural Engineer familiar with earthquake damage to determine whether the building can be occupied, the extent of damage, and what remediation measures should be implemented
- ❑ Designated key personnel and emergency contractors should be called to coordinate and start repairs and salvage
- ❑ Ensure that all contractors are familiar with Company Policy Programs and share responsibility for fire safe conditions at all times
- ❑ Report damage to insurance companies as soon as possible

Additional Information

AIG clients can contact their Risk Engineer or Risk Consultant for additional support.

No warranty, guarantee, or representation, either expressed or implied, is made as to the correctness or sufficiency of any representation contained herein. This report may not address each and every possible loss potential, violation of any laws, rules or regulations, or exception to good practices and procedures. The absence of comment, suggestion, or recommendation does not mean the property or operation(s) is in compliance with all applicable laws, rules, or regulations, is engaging in good practices and procedures, or is without loss potential. No responsibility is assumed for the discovery and/or elimination of hazards that could cause accidents or damage at any facility that is subject to this report. Reliance upon, or compliance with, any of the information, suggestions or recommendations contained herein in no way guarantees the fulfillment of your obligations under your insurance policy or as may otherwise be required by any laws, rules or regulations.

American International Group, Inc. (AIG) is a leading global insurance organization. AIG member companies provide a wide range of property casualty insurance, life insurance, retirement solutions, and other financial services to customers in more than 80 countries and jurisdictions. These diverse offerings include products and services that help businesses and individuals protect their assets, manage risks and provide for retirement security. AIG common stock is listed on the New York Stock Exchange. Additional information about AIG can be found at www.aig.com | YouTube: www.youtube.com/aig | Twitter: @AIGinsurance www.twitter.com/AIGinsurance | LinkedIn: www.linkedin.com/company/aig. These references with additional information about AIG have been provided as a convenience, and the information contained on such websites is not incorporated by reference into this document.

AIG is the marketing name for the worldwide property-casualty, life and retirement, and general insurance operations of American International Group, Inc. For additional information, please visit our website at www.aig.com. All products and services are written or provided by subsidiaries or affiliates of American International Group, Inc. Products or services may not be available in all countries and jurisdictions, and coverage is subject to underwriting requirements and actual policy language. Non-insurance products and services may be provided by independent third parties. Certain property-casualty coverages may be provided by a surplus lines insurer. Surplus lines insurers do not generally participate in state guaranty funds, and insureds are therefore not protected by such funds.
