

# Slip, Trip, and Fall Prevention: Self-Inspection Checklist

Falls are the leading cause of nonfatal, unintentional injuries treated in hospital emergency departments according to data from the All Injury Program, a cooperative program involving the National Center for Injury Prevention and Control, Centers for Disease Control (CDC), and the Consumer Product Safety Commission (CPSC). Nearly eight million people are treated in emergency rooms for fall-related injuries.

According to the Department of Justice’s Americans with Disabilities Act (ADA), aisles that are too narrow, handrails that are too low or too high, or other architectural barriers can be dangerous for people with mobility disabilities. While government agencies work to keep people safe, workplaces have a great degree of flexibility in how they provide safe passage. This checklist highlights some common deficiencies though users are encouraged to modify it to incorporate potential slip, trip, or fall exposures at a facility.
