

Marine Loss Control Engineering (MLCE)

A global network of experienced Marine Consultants...

Master Mariners

Port captains

Stevedores

Cargo surveyors

...with depth and breadth of maritime experience

Our Marine Loss Control Engineering team provides a wide range of expert risk management services to identify, quantify and minimize clients' marine exposures.

Wide-ranging capabilities that reduce a client's total cost of risk

Global network of maritime expertise

We are a global network of strategically placed marine consultants averaging 25 years of industry experience. Most have sea-going backgrounds, licensed as Master Mariners supported by wide complementary experience as former cargo surveyors, port captains, stevedores and specialised expertise in areas such as supply chain security, logistics, and cargo packaging.

Proactive and reactive risk control

We proactively work with clients to understand their businesses and address their needs based on our deep industry expertise, local knowledge and global reach. We also consistently monitor claims and react quickly to emerging trends or severe losses with business solutions. Our services are tailored to benefit clients in every aspect of maritime or "inland marine" trade, from multinational manufacturers, to ship repairers to logistics service providers.

Effective client communication

Effective communication amongst all stakeholders is a key element to the success of our programs which is achieved through timely dissemination of industry risk insights, regular stewardship meetings and direct 24/7 client access to the Marine Loss Control Engineering team.

Service examples

- Ensuring that appropriate security protocols for road transport are established for a client's shipment of high value pharmaceuticals to avoid cargo theft in Mexico.
- Mitigating marine terminal liability risk exposures through assisting a client with the adoption of safer cargo storage or handling procedures.
- Providing proper oversight of lifting, handling and securing processes to ensure a gas turbine is delivered on time and in undamaged condition to a project site, avoiding a potential costly delay in start-up of a power plant.
- Assisting a contractor with managing his heavy equipment exposures through implementation of more robust driver selection and screening processes; project site security controls or hydraulic hose inspection and replacement programs.

Showcasing our capabilities through Success Stories

Flawed transportation plans

A marine client chartered a vessel for transport of a heavy lift module standing over 20 stories tall that required specialized handling, stowage and securing. Upon review of the original work process, our Marine Loss Control Engineering team found flaws in the stowage and securing plan with potentially disastrous consequences for the vessel as well as for the cargo. We worked with the client, shipping line and other stakeholders to improve the plans to ensure the cargo arrived on time and undamaged at its final destination.
