

Supply Chain Risk Assessment

Business impact specialists

analyze and assess supply chains

to quantify risks and test mitigation strategies

Our Business Impact engineering services analyze and assess clients' global supply chain risks using leading-edge loss estimate tools to identify high risk suppliers. Following an initial assessment, our specialists can then focus on quantifying the risk and testing mitigation strategies through our advanced comprehensive modeling analytics, visualization and risk assessment capabilities.

Wide-ranging capabilities that reduce a client's total cost of risk

Basic assessment

Our Contingent Business Interruption (CBI) assessment for clients uses our internal business interruption loss estimate tools to provide a relative risk ranking view of the client's supply chain risk. This approach helps identify high risk initial tier suppliers against potential natural catastrophe, fire and other peril events. It is based upon a set of selected scenarios which can be analyzed on key sites within the client's supply chain network and gives clients an indication of their supply chain risk level and informs clients' decision making around contingent business interruption insurance.

Quantifying supply chain disruption

Our advanced modeling assessment identifies high risk suppliers, and low risk localities for compatible alternatives. It quantifies the risk impact of adding new suppliers, optimal inventories for critical components and the overall supply chain disruption risk for fire, storm, flood and earthquake. "What if" scenario analyses can test different risk mitigation strategies. These more complex assessments quantify the risk from the supported perils, support aligned contingent business interruption coverage and more focused loss prevention strategies.

For manufacturers

Manufacturing companies depending on multi-tiered supplier networks or single-sourced suppliers and intermediate manufacturers reliant on key customers can benefit from our supply chain business interruption assessments. All manufacturers can take advantage of these services, especially in those sectors characterized by complex inter-dependencies such as automotive, technology, medical devices, pharmaceutical, consumer goods, industrial and transportation equipment.

For service providers

Non-manufacturing companies that deliver services with integral third party suppliers or customers can benefit from our supply chain analytical and assessment services. Ideal candidates in the service sector include wholesale and retail operations, transportation services and systems and logistics services companies.

AIG is the marketing name for the worldwide property-casualty, life and retirement, and general insurance operations of American International Group, Inc. For additional information, please visit our website at www.aig.com. All products and services are written or provided by subsidiaries or affiliates of American International Group, Inc. Products or services may not be available in all countries, and coverage is subject to actual policy language. Non-insurance products and services may be provided by independent third parties. Certain property-casualty coverages may be provided by a surplus lines insurer. Surplus lines insurers do not generally participate in state guaranty funds, and insureds are therefore not protected by such funds.
