

Upstream Risk Engineering

Specialist team

providing upstream risk engineering assessments

that quantify risks and develop a path forward to success

Our Client Risk Solutions (CRS) risk engineering team offers operators a complete solution to their upstream risk engineering needs. AIG can provide risk engineering services related to key license to operate requirements at all project phases from development through implementation.

Wide-ranging capabilities that reduce a client's total cost of risk

Underground Gas Storage (UGS)

Recent incidents in the industry have led to regulatory changes, leaving UGS operators to determine if they are in compliance. The AIG CRS Risk Engineering team can assist in a review of the operators existing policies and procedures and conduct a gap analysis to determine future needs and to offer improvement recommendations. We can also assist our clients in conducting a desktop integrity review of their UGS wells.

Well Integrity Reviews

Well integrity is concerned with the complete life cycle of the well. Managing well integrity is an on-going challenge that requires the assurance of safe and reliable containment of well fluids. AIG can assist our clients by conducting data reviews of their well stock for evaluation of overall well integrity. Reviews consist of barrier review, data evaluation and organization, and gap analysis against industry best practices.

Gap Analysis/Risk Assessments

Conduct gap analysis studies of an organizations programs and procedures against industry standards and regulatory requirements. AIG's CRS Risk Engineering teams can conduct risk assessments to allow for the prioritization of higher risk assets/wells.

Policy and Procedure Development

Develop policies and procedures to promote adherence with industry, regulatory, and internal requirements. Services offer knowledge of industry best practices to allow us to evaluate and improve existing management systems or develop new ones.

Business income valuation and assessment

We provide comprehensive business interruption assessments of single site locations, including evaluation of business income, interdependencies, alternative production capacities, inventory durations, downtime evaluations, restoration and step recovery. We also specialize in analytical services, reviewing and developing business income worksheets, business income exposure assessment, recovery and restoration valuations.

Business impact analysis

Our Business Impact Analysis services for energy companies identify Single Points of Failure (gaps in day to day processes that are not readily replicated elsewhere in the business) which present significant disruption potential to the overall operation. This approach lays the foundation for development of a robust business continuity plan for the organization.
